**ABSTRACT**

Coumarin has been isolated from seed of *Areca catechu* L. an ethyl acetate fraction which needle crystal products at 184 –185°C. Based on thin layer chromatography analysis using n-hexane : acetone (4 : 6) as eluent got Rf 0.6. From elemental analysis, mass spectra, ultraviolet spectra, infra red spectra, nuclear magnetic resonance spectra ( H and C NMR) ,concluded this compound was 7-hidroksi-4-metil coumarine.

**Keywords :** *Areca catechu*, 7-hidroksi-4-metil kumarin.
